Maintainer Christoph Burow <christoph.burow@uni-koeln.de>
Description A collection of 'shiny' applications for the R package
      'Luminescence'. These mainly, but not exclusively, include applications for
      plotting chronometric data from e.g. luminescence or radiocarbon dating. It
      further provides access to bootstraps tooltip and popover functionality and
      contains the 'jscolor.js' library with a custom 'shiny' output binding.

RLumShiny-package

Shiny Applications for the R Package Luminescence

Description

A collection of shiny applications for the R package Luminescence. These mainly, but not exclusively, include applications for plotting chronometric data from e.g. luminescence or radiocarbon dating. It further provides access to bootstraps tooltip and popover functionality as well as a binding to JSColor.

Details

In addition to its main purpose of providing convenient access to the Luminescence shiny applications (see app_RLum) this package also provides further functions to extend the functionality of shiny. From the Bootstrap framework the JavaScript tooltip and popover components can be added to any shiny application via tooltip and popover. It further provides a custom input binding to the JavaScript/HTML color picker JSColor. Offering access to most options provided by the JSColor API the function jscolorInput is easily implemented in a shiny app. RGB colors are returned as hex values and can be directly used in R's base plotting functions without the need of any format conversion.

app_RLum

Run Luminescence shiny apps

Description

A wrapper for runApp to start interactive shiny apps for the R package Luminescence.

Usage

```
app_RLum(app = NULL, ...)
```

Arguments

app character (**required**): name of the application to start. See details for a list of available apps.

... further arguments to pass to runApp

app_RLum 3

Details

The RLumShiny package provides a single function from which all shiny apps can be started: app_RLum(). It essentially only takes one argument, which is a unique keyword specifying which application to start. See the table below for a list of available shiny apps and which keywords to use. If no keyword is used a dashboard will be started instead, from which an application can be started.

Application name:	Keyword:	Function:
Abanico Plot	abanico	plot_AbanicoPlot
Histogram	histogram	plot_Histogram
Kernel Density Estimate Plot	KDE	plot_KDE
Radial Plot	radialplot	plot_RadialPlot
Dose Recovery Test	doserecovery	plot_DRTResults
Cosmic Dose Rate	cosmicdose	calc_CosmicDoseRate
CW Curve Transformation	transformCW	CW2pHMi, CW2pLM, CW2pLMi, CW2pPMi
Filter Combinations	filter	plot_FilterCombinations
Fast Ratio	fastratio	calc_FastRatio
Fading Correction	fading	<pre>analyse_FadingMeasurement, calc_FadingCorr</pre>
Test Stimulation Power	teststimulationpower	plot_RLum
Scale Gamma Dose Rate	scalegamma	scale_GammaDose
RCarb app	RCarb	RCarb::model_DoseRate

The app_RLum() function is just a wrapper for runApp. Via the ... argument further arguments can be directly passed to runApp. See ?shiny::runApp for further details on valid arguments.

runApp

```
## Not run:
# Dashboard
app_RLum()
# Plotting apps
app_RLum("abanico")
app_RLum("histogram")
app_RLum("KDE")
app_RLum("radialplot")
app_RLum("doserecovery")
# Further apps
app_RLum("cosmicdose")
app_RLum("transformCW")
app_RLum("filter")
app_RLum("fastratio")
app_RLum("fading")
app_RLum("surfaceexposure")
app_RLum("teststimulationpower")
```

4 jscolorInput

```
app_RLum("scalegamma")
app_RLum("RCarb")
## End(Not run)
```

jscolorInput

Create a JSColor picker input widget

Description

Creates a JSColor (Javascript/HTML Color Picker) widget to be used in shiny applications.

Usage

```
jscolorInput(inputId, label, value, position = "bottom",
  color = "transparent", mode = "HSV", slider = TRUE,
  close = FALSE)
```

Arguments

inputId	character (required): Specifies the input slot that will be used to access the value.
label	character (optional): Display label for the control, or NULL for no label.
value	character (optional): Initial RGB value of the color picker. Default is black ('#000000').
position	character (with default): Position of the picker relative to the text input ('bottom', 'left', 'top', 'right').
color	character (with default): Picker color scheme ('transparent' by default). Use RGB color coding ('000000').
mode	character (with default): Mode of hue, saturation and value. Can either be 'HSV' or 'HVS'.
slider	logical (with default): Show or hide the slider.
close	logical (with default): Show or hide a close button.

See Also

Other input.elements: animationOptions, sliderInput; checkboxGroupInput; checkboxInput; dateInput; dateRangeInput; fileInput; numericInput; passwordInput; radioButtons; selectInput, selectizeInput; submitButton; textInput

```
# html code
jscolorInput("col", "Color", "21BF6B", slider = FALSE)
# example app
## Not run:
shinyApp(
ui = fluidPage(
```

popover 5

popover

Create a bootstrap button with popover

Description

Add small overlays of content for housing secondary information.

Usage

```
popover(title, content, header = NULL, html = TRUE,
  class = "btn btn-default", placement = c("right", "top", "left",
  "bottom"), trigger = c("click", "hover", "focus", "manual"))
```

Arguments

title character (**required**): Title of the button.

content character (**required**): Text to be displayed in the popover.

header character (optional): Optional header in the popover.

html logical (with default): Insert HTML into the popover.

class logical (with default): Bootstrap button class (e.g. "btn btn-danger").

placement character (with default): How to position the popover - top | bottom | left | right

l auto. When "auto" is specified, it will dynamically reorient the popover. For example, if placement is "auto left", the popover will display to the left when

possible, otherwise it will display right.

trigger character (with default): How popover is triggered - click | hover | focus |

manual.

6 tooltip

```
mode = "HVS", close = TRUE),
popover(title = "Help!", content = "Call 911"),
plotOutput("plot")
),
server = function(input, output) {
  output$plot <- renderPlot({
    plot(cars, col = input$col, cex = 2, pch = 16)
})
})
## End(Not run)</pre>
```

RLumShinyAddin

RLumShiny Dashboard Addin

Description

RLumShiny dashboard

Usage

RLumShinyAddin()

tooltip

Create a bootstrap tooltip

Description

Create bootstrap tooltips for any HTML element to be used in shiny applications.

Usage

```
tooltip(refId, text, attr = NULL, animation = TRUE, delay = 100,
   html = TRUE, placement = "auto", trigger = "hover")
```

Arguments

refId character (**required**): id of the element the tooltip is to be attached to. character (required): Text to be displayed in the tooltip. text character (optional): Attach tooltip to all elements with attribute attr='refId'. attr animation logical (with default): Apply a CSS fade transition to the tooltip. numeric (with default): Delay showing and hiding the tooltip (ms). delay logical (with default): Insert HTML into the tooltip. html character (with default): How to position the tooltip - top | bottom | left | placement right | auto. When 'auto' is specified, it will dynamically reorient the tooltip. For example, if placement is 'auto left', the tooltip will display to the left when possible, otherwise it will display right. character (with default): How tooltip is triggered - click | hover | focus | trigger

manual. You may pass multiple triggers; separate them with a space.

tooltip 7

```
# javascript code
tt <- tooltip("elementId", "This is a tooltip.")</pre>
# example app
## Not run:
shinyApp(
ui = fluidPage(
  jscolorInput(inputId = "col", label = "JSColor Picker",
               value = "21BF6B", position = "right",
               mode = "HVS", close = TRUE),
  tooltip("col", "This is a JScolor widget"),
  checkboxInput("cbox", "Checkbox", FALSE),
  tooltip("cbox", "This is a checkbox"),
  checkboxGroupInput("cboxg", "Checkbox group", selected = "a",
                     choices = c("a" = "a",
                                  "b" = "b"
                                  c'' = c''),
  tooltip("cboxg", "This is a <b>checkbox group</b>", html = TRUE),
  selectInput("select", "Selectinput", selected = "a", choices = c("a"="a", "b"="b")),\\
  tooltip("select", "This is a text input field", attr = "for", placement = "right"),
  passwordInput("pwIn", "Passwordinput"),
  tooltip("pwIn", "This is a password input field"),
 plotOutput("plot")
server = function(input, output) {
  output$plot <- renderPlot({</pre>
    plot(cars, col = input$col, cex = 2, pch = 16)
})
})
## End(Not run)
